# vultr\_reverse\_ipv4

---

## Introduction

---

Get information about a Vultr instance IPv4.

## Example Usage

---

Get the information for an IPv4 address by `instance_id`:

HCL

```
data "vultr_instance_ipv4" "my_instance_ipv4" {
  filter {
    name = "ip"
    values = ["123.123.123.123"]
  }
}
```

## Argument Reference

---

The following arguments are supported:

- `filter` - (Required) Query parameters for finding IPv4 address.

The `filter` block supports the following:

- `name` - Attribute name to filter with.
- `values` - One or more values to filter with.

# Attributes Reference

---

The following attributes are exported:

- `instance_id` - The ID of the instance the IPv4 address.
- `ip` - The IPv4 address in canonical format.
- `gateway` - The gateway IP address.
- `netmask` - The IPv4 netmask in dot-decimal notation.
- `reverse` - The reverse DNS information for this IP address.
