# vultr\_iso\_public

---

## Introduction

---

Get information about an ISO file offered in the Vultr ISO library.

## Example Usage

---

Get the information for a ISO file by `description`:

HCL

```
data "vultr_iso_public" "my_iso" {
  filter {
    name     = "description"
    values  = ["iso-description"]
  }
}
```

## Argument Reference

---

The following arguments are supported:

- `filter` - (Required) Query parameters for finding ISO files.

The `filter` block supports the following:

- `name` - Attribute name to filter with.
- `values` - One or more values filter with.

# Attributes Reference

---

The following attributes are exported:

- `name` - The ISO file's name.
- `description` - The description of the ISO file.
- `md5sum` - The MD5Sum of the ISO file.
