vultr_object_storage

Introduction

Get information about an Object Storage subscription on Vultr.

Example Usage

Get the information for an object storage subscription by `label` :

HCL

```
data "vultr_object_storage" "s3" {
  filter {
    name   = "label"
    values = ["my-s3"]
  }
}
```

Argument Reference

The following arguments are supported:

- `filter` - (Required) Query parameters for finding operating systems.

The `filter` block supports the following:

- `name` - Attribute name to filter with.
- `values` - One or more values filter with.

Attributes Reference

The following attributes are exported:

- `label` - The label of the object storage subscription.
- `location` - The location which this subscription resides in.
- `cluster_id` - The identifying cluster ID.
- `region` - The region ID of the object storage subscription.
- `s3_access_key` - Your access key.
- `s3_hostname` - The hostname for this subscription.
- `s3_secret_key` - Your secret key.
- `status` - Current status of this object storage subscription.
- `date_created` - Date of creation for the object storage subscription.
