# Introduction

The  `Vultr CLI instance tags`  command manages tags for Vultr instances, allowing you to list, add, or remove metadata labels for organization and filtering purposes.

## Usage

### CONSOLE

```
$ vultr-cli instance tags <Instance ID> [flags]
```

## Examples

### CONSOLE

```
# Full example
$ vultr-cli instance tags <instanceID> --tags="example-
tag-1,example-tag-2"

# Shortened example with aliases
$ vultr-cli instance tags <instanceID> -t="example-tag-1,example-
tag-2"
```

## Flags

Shorthand	Long Version	Description
-t	--tags	A comma separated list of tags to apply to the instance
