Introduction

The `Vultr CLI load-balancer list` command displays all load balancers in your Vultr account, showing their IDs, labels, status, and other key configuration details.

Usage

CONSOLE

```
$ vultr-cli load-balancer list <Load Balancer ID> [flags]
```

Examples

CONSOLE

```
# Full example
$ vultr-cli load-balancer list

# Full example with paging
$ vultr-cli load-balancer list --per-page=1 --
  cursor="bmV4dF9fQU1T"

# Shortened with alias commands
$ vultr-cli lb l

# Summarized view
$ vultr-cli load-balancer list --summarize
```

Flags

Shorthand	Long Version	Description
-c	--cursor	(optional) cursor for paging.

Shorthand	Long Version	Description
-p	--per-page	(optional) Number of items requested per page. Default is 100 and Max is 500.
-	--summarize	(optional) Summarize the list output. One line per load balancer.
